

What Makes *Spitfire*® Different?

THE QUICKEST

Seconds count! This fluid motion is lightning fast! Slide *Spitfire*'s firing button forward off safety and press down to spray.

How to Fire

THE MOST ACCURATE

Pepper spray works best when you hit the attacker's eyes. With a *Spitfire*®, you can do it with your first shot without aiming. Only the *Spitfire*® dispenser is ergonomically engineered to point and shoot instinctively. Like your finger, you can point our horizontal dispenser in every direction with instinctive accuracy.

THE SAFEST TO CARRY

Only *Spitfire*® has a spring connected to the firing button that holds it on "Safe" and automatically returns it to "Safe" from any position. *Spitfire*® is child resistant for preschoolers.

DISCREET DESIGN

You can discreetly conceal a *Spitfire*® in your hand or pocket. This sleek, feather-weight design is convenient to carry.

FLOAT TEST

You can easily determine if your *Spitfire*® is loaded by simply dropping the pepper canister into water.

- If it sinks, it's good.
- If it floats, reload it.

REFILLS

Spitfire® is not a throw-away dispenser like ordinary pepper sprays.

Pepper canister refills are available wherever you buy *Spitfire*®.

Pepper canisters spray best during the first twenty-four months.

PRACTICE CANISTERS

Practice Canisters are available that contain no pepper. Use them in your *Spitfire*® dispenser to practice indoors.

*Each package includes the *Spitfire*® dispenser, pepper spray canister, Snap-Free® key ring and instructions.

SURPRISE YOUR ATTACKER

Surprise is a formidable advantage in combat. Shoot your *Spitfire*® from near your hip into the attacker's eyes to surprise him.

GRABBED FROM BEHIND

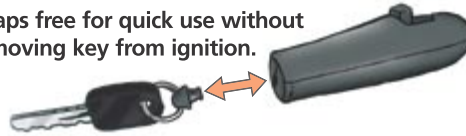

A woman is often attacked from behind because her attacker wants to clamp his hand over her mouth to prevent her from screaming for help.

It is awkward to spray behind your back with an ordinary pepper spray. Only the *Spitfire*® dispenser is designed to easily hit the eyes of an attacker behind your back.

SNAP-FREE® KEY RING

Only a *Spitfire*® snaps free from your key ring for swift use when you are attacked in your car. This may save your life.

Snaps free for quick use without removing key from ignition.

With an ordinary pepper spray on your key ring, you must turn off your car in order to remove your key from the ignition – too slow. *Spitfire*® snaps back together again for reuse.

SPITFIRE® IS STRONG

Spitfire® sprays 8 single half-second shots or longer continuous shots of pepper spray out to 8 feet in a cone pattern.

Spitfire® pepper spray contains a 10% solution of the best quality police-strength OC (Oleoresin Capsicum) that is confirmed by laboratory HPLC testing to have a heat rating of 2 million SHU (Scoville Heat Units).

ENVIRONMENTALLY FRIENDLY

Spitfire's formula is non-flammable. It does not impact the ozone layer.
